Ensure Every Nurse Walks the Floor Knowing Your Protocols

A structured 30-day study on a single unit: proactive pre-shift alignment and real-time point-of-care answers drawn directly from your facility SOPs, measured against your historical baseline.

We have a binder at the nurses' station with all our policies. They sign off that they read it. But are they actually reading it, or just signing that they acknowledge?

— DON, LTC FACILITY, MISSOURI

THE INTERVENTION

START OF SHIFT

01

Five-minute protocol checks

- **Five-minute briefs:** A targeted operational refresh on urgent QA updates, facility layout, and compliance parameters.
- **Active verification:** Clinicians navigate a short floor scenario they must recognize and act on.
- **Float & agency support:** Instantly aligns external or float staff with unit rules before they step onto the floor.

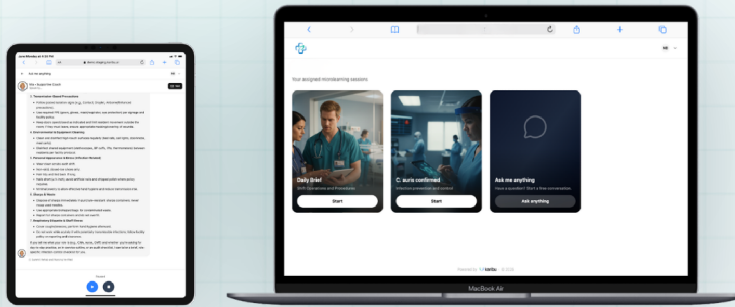

ON THE SHIFT

02

Bedside answers from your SOPs

- **Point-of-care guardrails:** When a clinician is unsure of a protocol mid-shift, Karibu delivers an instant voice or text answer grounded strictly in your facility policy.
- **Uses existing screens:** Runs directly in a standard web browser on the computers and workstations your units already use. No apps to download and no software to install.

DURATION

One 30-day cycle on a single unit, against your baseline.

ROLLOUT

A clear 2-step soft launch: on-site floor walkthrough, then a single-unit pilot within a week.

ENDPOINTS

Clinical readiness scores and self-driven utilization rates, reviewed at weeks 2 and 4.

PROPOSING THE STUDY

Most DONs propose it to their administrator in three lines:

NOTE TO YOUR ADMINISTRATOR

"I'd like to run a 30-day evaluation on one unit: nurses get a 5-minute pre-shift protocol brief and an on-shift clinical Q&A assistant pulled directly from our own SOPs. We will measure its impact on our clinical readiness scores and self-driven utilization rates against our baseline. It uses an on-site web setup with no IT overhead, and we stop immediately if our endpoints don't improve. Okay to proceed?"
